

Shemeel Sakeer

.NET Full Stack Developer | ASP.NET Core | Web API | React | SQL Server

Kerala, India | shameelvk95@gmail.com | +91 9605621681 | LinkedIn | Github | Portfolio

PROFESSIONAL SUMMARY

Full Stack .NET Developer with hands-on experience building production-level web applications and microservices using C#, .NET 8, ASP.NET Core, and Web API. Skilled in designing scalable backend systems across distributed architectures, developing RESTful APIs, and integrating AI/ML pipelines using LLMs. Proficient in building responsive frontends with React and experienced in real-time communication using SignalR and event-driven systems with RabbitMQ. Solid understanding of OOP, design patterns, Clean Architecture, and Domain-Driven Design with active exposure to Agile/Scrum. Known for taking initiative, collaborating effectively across teams, and delivering reliable, maintainable, high-quality code.

TECHNICAL SKILLS

Programming Languages: C#, JavaScript, Python, C, C++

Backend Technologies: ASP.NET Core, ASP.NET MVC, Web API (.NET 8), Entity Framework Core, Dapper, LINQ, SignalR, RabbitMQ, YARP API Gateway

Frontend Technologies: HTML5, CSS3, React.js, Tailwind CSS, Axios, React Router, TypeScript

Database: Microsoft SQL Server, T-SQL, Stored Procedures

AI & Machine Learning: Large Language Models (LLM), Ollama, Prompt Engineering

Architecture & Design: Microservices Architecture, Clean Architecture, Event-Driven Architecture, RESTful API, Dependency Injection (DI), SDLC, Design Patterns, Unit Testing (xUnit)

Security & Auth: JWT Authentication, Access & Refresh Tokens, Role-Based Access Control, BCrypt, Google OAuth 2.0

Integrations & Tools: Daily.co (WebRTC), Razorpay, Cloudinary, SMTP, AutoMapper, Swagger, Postman, Git/GitHub, Docker, Docker Compose, n8n

Cloud/DevOps: AWS (EC2, RDS), Railway, Azure (SQL, Container Apps), Oracle Cloud, CI/CD (GitHub Actions)

PROJECTS

CaseBridge – AI-Powered Legal Marketplace Platform (*Ongoing*)

- Architected a two-sided legal marketplace using C#, .NET 8, Dapper, SQL Server, and React.js across 3 microservices with an API Gateway (YARP), following domain-driven service boundary design.
- Engineered an AI document analysis pipeline using Ollama (Mistral 7B) for legal case strength scoring (0–100), risk flag detection, and automated post-consultation report generation, processing documents asynchronously via RabbitMQ event-driven architecture.
- Implemented dual authentication using JWT (access + refresh tokens) and Google OAuth 2.0, with role-based access control across Client, Lawyer, and Admin roles.
- Built real-time features using SignalR for live case strength meter animation, instant chat messaging, AI analysis notifications, and consultation alerts across all active case participants.
- Integrated Daily.co WebRTC SDK for secure private video consultations with auto-expiring rooms and per participant token generation via REST API.
- Designed a lawyer trust system with automated reputation-based verification (Provisional → Verified) driven by case completion metrics and client ratings, with a background job processing status upgrade via stored procedures

- Implemented a layered file storage strategy using MinIO (local), Cloudinary (production), with environment-aware provider switching via a shared IStorageService abstraction.
- Automated court date reminders, deadline alerts, and lawyer engagement workflows using n8n, and deployed services to Railway with GitHub Actions CI/CD pipelines.

Elevé Studio – Full Stack E-Commerce Platform | [Link](#) | [GitHub](#)

- Developed a full-stack E-commerce platform using C#, ASP.NET Core, Web API, Entity Framework Core, SQL Server, and React.js following Clean Architecture principles.
- Implemented secure authentication and authorization using JWT with access token and refresh token mechanisms, integrated with ASP.NET Identity, Role-Based Access Control, and BCrypt-based password hashing.
- Designed and developed 40+ REST API endpoints supporting authentication, product management, cart operations, order processing, admin workflows, and payment integration.
- Integrated Razorpay payment gateway and implemented automated invoice generation.
- Implemented OTP-based password recovery system using SMTP email services for secure account access.
- Deployed the application on AWS using EC2 for hosting and RDS for database management, and implemented CI/CD pipelines using GitHub Actions for automated build and deployment.

EXPERIENCE

Full Stack .NET Developer Intern – Bridgeon Solutions

June 2025 — Present

- Developed and maintained production-level backend modules using C#, .NET Core, and ASP.NET Web API, contributing to RESTful API design across authentication, user management, cart, and order workflows.
- Architected and built CaseBridge, an AI-powered legal marketplace across 3 microservices using .NET 8, Dapper, RabbitMQ, and SignalR — independently owning the full stack from API Gateway (YARP) design to real-time feature delivery.
- Volunteered for tasks outside assigned scope, helped teammates navigate non-technical blockers, and assisted in coordinating team activities — consistently contributing beyond the immediate role to keep the team aligned and moving forward.
- Actively participated in Agile/Scrum ceremonies including daily stand-ups, sprint planning, and retrospectives, contributing to iterative delivery and continuous improvement across the development cycle.

EDUCATION

Bachelor of Computer Application (Computer Science)

Vidya Vikas First Grade College – Mysore | 2022-25

CGPA – 7.98

CERTIFICATION

Microsoft Azure AI Fundamentals (AI-900) — [View Certificate](#)
